

High School Science Club

The Science Club encourages scientific inquiry and engineering through students completing a science fair project. The students perform all the experimentation on their own with the supervision of the sponsor. Students then construct a science fair board that sums up the project and shows all data and conclusions in a neat and easy to read format. On the day of the science fair, students answer questions before a panel of judges as they are graded and a 1st, 2nd, and 3rd place winner is selected by the best scores. All members of the club also go on a yearly field trip. Gleason is one of the few schools left in our area that still holds an annual science fair. Gleason School seeks to keep interest in scientific investigation and engineering active through this club.
